50.00 -110.64

Set a page to use when opening New Tabs. By default the included Google Search page will open, or you can choose a local .html page (needs file URL permissions), a blank page, a website, or another extension's page.

Override and spoof your browser's user-agent string. Chromify will make Opera or Vivaldi look like Chrome.

Show the custom page when the browser is launched.

Show the custom page when New Tabs are opened.

Treat non-active text URL links that normally do not open as regular links that open, by double-clicking.

Enable history navigation via simple mouse gestures. While holding right-click, swipe the mouse left or right.

Automatically increase resolution to 720p or 1080p.

Don't disclose the links clicked on Google search page.

Change tab opening/closing behaviour of the browser.

Language to use for content translation on websites.

Spoof your current GPS location for privacy reasons.

Most web browsers display the URL of a web page above the page in an address bar. A typical URL could have the form `http://www.example.com/index.html`, which indicates a protocol (`http`), a hostname (`www.example.com`), and a file name (`index.html`).

Select some text on any website and then press Ctrl+Alt to translate utilizing the Google Translate service.
